**Domain - C/C++ Programming**

**Project Title: simple calculator**

## **Task Description**

**Create a simple calculator program in C/C++ capable of performing basic arithmetic operations like addition, subtraction, multiplication, and division. Prompt the user to input an operator (+, -, \*, /) and two numbers. Based on the operator entered, perform the respective operation and display the result. Implement error handling to prevent division by zero and handle invalid operators gracefully. Ensure the program is user-friendly by providing clear instructions and error messages.**
